Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 35-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zedalis et al.

Zedalis et al. disclose a method of forming a composite material comprising:

providing an aluminum powder (col. 1, lines 61-63);

- adding a silicon carbide powder to the aluminum powder to form a mixture (col. 3, lines 31-35);

compacting said mixture to form a compact (col. 4, lines 54-58); and

Art Unit: 1742

sintering said compact to form an aluminum/silicon carbide composite material (col. 4, lines 58-64).

Zedalis et al. further disclose wherein the sintering takes place at temperature up to 600°C (col. 4, line 64).

However, Zeladis et al. is silent as to the sintering atmosphere.

It is common knowledge in the prior art to sinter aluminum composites in inert atmospheres, including nitrogen, low moisture, low oxygen atmospheres to prevent contamination of the sintered composite, and to use such an atmosphere in the invention of Zeladis et al. would be obvious to prevent such contamination.

4. Claim 40 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art does not teach or suggest the repressing step.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 41-49 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1742

Claim 41, lines 12-13 contain "pre-formed substrate" which has no antecedent basis.

The Examiner suggests inserting --pre-formed-- before "substrate" in line 11.
